Inauguration of "Vasudha - The Mother Earth" Experiential Digital exhibition

The blue jewel of our Solar System, the Earth, Our Home,
the only home, known so far.

Sages called her Vasudhā - Mother Earth,
alive and organic whole, through inter-dependence,
of existence - both animate and inanimate.

She provides the air we breathe, water we drink,
nourishment we need, and resources we use.

She has enough for our needs, but not greed.
Greed has affected Her health, with climate change,
in turn harming human health in body-mind.

Let us join hands to help her in self-rejuvenation,
by living holistic life lived and preached by sages.

Vasudhā
Enabling Sustainable Living

TO LEARN HOW TO LIVE!!
AND SAVE THE BLUE JEWEL FOR FUTURE

In this issue:

- Inauguration of "Vasudha - The Mother Earth"
- The Happenings
- Visions of Wisdom:
 - Regenerative Development
 - Bad effects of Modern Science
 - Systems View of Life

Rely on Innerself

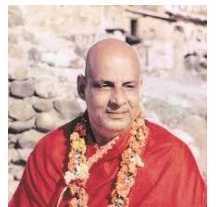

**"The divine within you is stronger
than anything that is without you.**

**Therefore, be not afraid of
anything. Rely on your own Inner
Self, the Divinity within you. Tap
the source through looking within.**

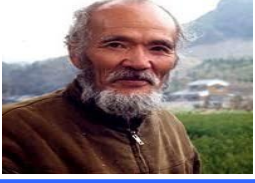

**Improve yourself. Build your
character. Purify the heart.**

Develop the divine virtues.

Eradicate evil traits.

Swami Sivananda Saraswati

"The ultimate goal of farming is not the growing of crops, but the cultivation and perfection of human beings"

- Masanobu Fukuoka

Visions of Wisdom

Regenerative Development

Rudolf Heredia talks about a Utopian memo for the next millennium and calls for an ecological ethic, which must be integrated into a 'design for living'. What we need, he says, is a new paradigm for society, sustained by such an ethic, with new 'mindfulness' - for in the final analysis, ecological values must be more than exchange values, or even use values!

The author talks about regenerative development and of a charter of human rights and cosmic duties. The human rights to be balanced by those found in Dharma - the performance of duty that keeps the world in the right order and harmony.

Rudolf C. Heredia
 Independent writer/researcher. He has his doctorate in Sociology

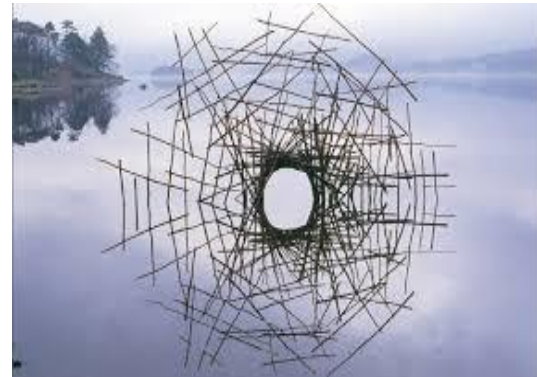

Bad Effects of Modern Science

'Modern' science has used such technology and culture that centralize the means of production, and make impossible the proper distribution of the wealth produced. It has over exploited Nature, burnt up scarce non-renewable resources, and has endangered all life support systems, air, water, soil fertility, biodiversity etc. And what has it given to humanity in exchange? Suppression of human emotions, fragmentation of family and community, frittering away of traditions built over thousands of years and medical cures which are more dangerous than the diseases they seek to alleviate!

Shri. N. Krishnamoorti
 Senior worker of Vivekananda Kendra and editor of Vivek Vani

Systems View of Life

What is of paramount importance is to understand that Nature is the practical externalized expression of Truth of which we are all part of. Therefore exploitation of nature and degradation of our environment tantamount to degrading the dignity of human life. Ecological awareness which attunes us to nature and her laws can have a profound bearing on human life. The more one develops rapport with nature and comprehends her laws the more one will be able to fit oneself into the Whole, into the Cosmoses. Such a 'systems' view of life which is gaining wide acceptance all over the World.

Dr. M. Lakshmi Kumari
 Director Vivekananda Kendra - Vedic Vision Foundation
